

## **The Future of Positron and Positronium Physics**

Moderator: Cliff Surko, U. C. San Diego, USA

In the workshop spirit, this final session is intended for the group to share views on the important results of the last few years and their potential to enable future discovery.

Possible topics for discussion include important problems that can be addressed in the next few years -- both by theory and experiment; how to make the most of emerging new resources and facilities; and potential synergies with other areas of physics and chemistry.
